Representation of Mother's Knowledge about Neonatal Jaundice Treatment in Aisyah Room of Kendal Islamic Hospital

xiv + 54 Pages + 8 Tables + 7 Appendices + 1 Charts

Abstract

Jaundice is one of the liver diseases found in newborns due to the hyperbillirubinemia. Data retrieved from Kendal Islamic Hospital showed that there were (49%) infants treated for hyperbillirubinemia. A lack of maternal knowledge about jaundice can affect attitudes and behaviors dealing with Neonatal Jaundice. The purpose of this research was to find out the representation of mother's knowledge about neonatal jaundice treatment at Aisyah Room of Kendal Islam Hospital. It was a quantitative research with descriptive observational method and survey approach. The sample used in the research was 32 respondents which were taken using total sampling technique. In analyzing the data, the researcher used univariate analysis. The results showed that the knowledge of respondents about the definition of neonatal jaundice was mostly good with 17 respondents (53.1%). Respondents' knowledge about the risk factors of neonatal Jaundice was mostly good with 21 respondents (65.6%). Knowledge of respondents about signs and symptoms of Neonatal Jaundice was mostly good with 18 respondents (56.3%). Respondents' knowledge about the clinical manifestations of Neonatal Jaundice was mostly good with 18 respondents (56.3%). Respondents' knowledge in preventing Neonatal Jaundice was mostly good with 21 respondents (65.6%). Knowledge about Neonatal Jaundice treatment was mostly good with 20 respondents (62.5%). For mother and families who still have less knowledge are expected to seek information about neonatal jaundice with a lot of reading magazine books and asked the paramedic.

Keywords: Knowledge, Neonatal Jaundice
