Faktor Internal dan Eksternal Perawatan Diri Mandiri Mantan Penderita Kusta Di Rehabilitation Village Sumber Telu Unit Rehabilitas Kusta RSUD Kelet Provinsi Jawa Tengah Tahun 2018

xiv+ 63 halaman+ 15 tabel+ 2 skema+ 11 lampiran

Abstrak

Perawatan diri pada mantan penderita kusta sangat diperlukan untuk mencegah kecacatan yang semakin parah. Jawa Tengah menempati urutan ke-3 terbanyak penderita kusta sebanyak 1.765 kasus dengan kecacatan 6,03%. Tujuan penelitian ini untuk mengetahui faktor internal dan eksternal perawatan diri pada Mantan Penderita Kusta di Rehabilitation Village Sumber Telu Unit Rehabilitas Kusta RSUD Kelet Provinsi Jawa Tengah Tahun 2018. Penelitian menggunakan metode deskriptif kuantitatif dan pendekatan survey analitik dengan melakukan wawancara menggunakan kuesioner. Sampel penelitian adalah mantan penderita kusta di Rehabilitation Village Sumber Telu, sampel penelitian berjumlah 95 responden. Hasil menunjukkan bahwa faktor internal dari perawatan diri mantan penderita kusta terdiri dari umur, jenis kelamin, pendidikan, lama aktivitas, pengetahuan dan sikap dengan persentase terendah pada pendidikan dan pengetahuan. Faktor eksternal perawatan diri mantan penderita kusta terdiri dari peran petugas, peran keluarga dan perawatan diri dengan persentase tertinggi pada peran petugas. Berdasarkan hasil tersebut maka penderita kusta diharapkan untuk lebih banyak mencari informasi agar menambah pengetahuan tentang penyakit kusta.

Internal and External Factors of Self-Care of Ex-Lepers at Rehabilitation Village of Sumber Telu Leprosy Rehabilitation Unit of Kelet Hospital in Central Java Province in 2018

xiv+63 pages+15 tables+2 schemes+11 attachments

Abstract

Self-care for ex-lepers is very necessary to prevent more severe disability. Central Java ranked 3rd most leprosy patients as many as 1,765 cases with 6.03% disability. The purpose of this study was to determine internal and external factors of self-care in ex-lepers in Rehabilitation Village of Sumber Telu Leprosy Rehabilitation Unit of Kelet Hospital in Central Java Province in 2018. The study sample was the ex-lepers at the Rehabilitation Village of Sumber Telu, the samples were 95 respondents. The results showed that internal factors of self-care of ex-lepers consist of age, sex, education, length of activity, knowledge, and attitudes with the lowest percentage of education and knowledge. External factors of self-care of ex-lepers consist of the role of officers, family roles and self-care with the highest percentage in the role of officers. Based on these results, lepers are expected to seek more information to increase knowledge about leprosy.
