**ASUHAN KEBIDANAN KOMPREHENSIF PADA NY. M G₁P₀A₀ UMUR 26 TAHUN
HAMIL 36⁺⁴ MINGGU DI PMB D AMD.KEB SEMARANG**

(xiii + 116 halaman + 13 tabel + 5 gambar + 5 bagan + 7 lampiran)

Latar belakang : Masalah kesehatan kehamilan meningkatkan jumlah morbiditas dan mortalitas. Menurut Profil Kesehatan Jawa Tengah (2017) jumlah AKI di Jawa Tengah 88,05 per 100.000 kelahiran hidup. AKB Jawa Tengah (2017) sebesar 8,9 per 1.000 kelahiran hidup. Dalam meminimalisir jumlah kematian ibu dan bayi dibutuhkan asuhan yang terstruktur, yaitu asuhan komprehensif.

Tujuan : penulisan tugas akhir mengkaji dalam bentuk studi kasus asuhan komprehensif di PMB D Amd.Keb Semarang.

Metode : menggunakan metode varney dan SOAP.

Hasil : berdasarkan diagnosa Ny M, G₁P₀A₀, umur 26 tahun, hamil 36⁺⁴ minggu dengan keluhan kenceng. Persalinan spontan pervaginam berlanjut masa nifas. Rencana yang diberikan KIE mengenai tanda bahaya nifas. Tanggal 20 Mei 2019 pukul 19.00 WIB dilakukan suntik KB 3 bulan. Riwayat BBL dengan BB 3140 gram, PB 49 cm, jenis kelamin laki-laki, menangis kuat, gerakan aktif, kulit kemerahan dan hasil baik selama 2 minggu. Pada asuhan komprehensif ini ditemukan kesenjangan, yaitu bidan tidak memakai APD lengkap.

Kesimpulan : pada penerapan asuhan kebidanan komprehensif terdapat kesenjangan antara teori dan praktik kebidanan di lahan.

Kata kunci : Asuhan Komprehensif, Tugas Akhir

Comprehensive Midwifery care on Mrs. M G₁ P₀ A₀ 26 Years, 36⁽⁺⁴⁾ Weeks pregnancy at the clinic of D AMD.KEB SEMARANG

Background of the study: Problem of health pregnancy increases the number of morbidity and mortality. Based on profile health Central Java Province (2017) the number of AKI or Maternal Mortality Ratio in Central Java was 88.05 per 100.000 birth. AKB in Central Java (2017) was as big as 8.9 per 1000 born life. In minimizing the number of death expectant mother and her baby, it needs care that organizes it comprehensively.

Objective: To Analyze the study case of Comprehensive midwifery care at the clinic D Amd.Keb Semarang.

Method: this research used *Varney* and *SOAP*

Result: Based on the diagnosis to Ny M, G¹P⁰A⁰ 26 years old, in 36⁺⁴ weeks with complaint contraction. Giving birth was spontaneous and continuing to childbirth. Planning given by KIE related a sign of danger the childbirth. On May 20 2019 at 07.00 pm did an injection of KB in 3 months. The story of fBBL was BB 3140 gram, PB 49 cm, male sex, strong crying, active, red skin, and the result was well as long as in 2 weeks. In this comprehensive midwifery care found the difference which is the midwives do not use complete APD.

Conclusion: In the application of comprehensive upbringing midwifery, there is an asymmetry between the theory and practice of midwifery in the truth.
