**LITERATURE REVIEW: THE COLERATION BETWEEN KNOWLEDGE
AND ATTITUDES OF PREGNANT WOMEN TO ANC EXAMINATION**

Antenatal Care (ANC) is a health service for pregnant women regularly at least four times during pregnancy. However, many pregnant women still do not know the importance of Antenatal Care examinations due to several factors, such as education, age, and environment. This study aimed was to review articles about the correlation between knowledge and attitudes of pregnant women to Antenatal Care (ANC) examinations. The method used a Literature Review using electronic media in searching for various journals in 2014-2019 through Google Scholar. This study indicated that the level of education, age, and environment significantly influences the knowledge and behavior of pregnant women to ANC examination.

Keywords: Knowledge, Attitude, ANC
