Asuhan Kebidanan Komprehensif pada Ny. M Umur 29 Tahun
Di PMB Sudyah Proborini Amd. Keb Genuk Semarang
(xiv + 154 hal + 9 tabel + 2 gambar+ 1 bagan+ 8 lampiran)**

Latar Belakang : Jumlah AKI di Kota Semarang 23 kasus pada tahun 2017 dan jumlah AKB 24 kasus, lima penyebab kematian ibu di Kota Semarang seperti emboli air ketuban, gangguan hati, perforasi peritonitis sebesar 35%, karena penyakit jantung, TBC sebesar 22%, preeklamsia dan eklamsia sebesar 22%, perdaraan sebesar 17 %, sepsis 4%.Dari data tersebut, sangat diperlukan upaya untuk dapat menekan penyebab kematian ibu di Indonesia.

Tujuan : Penulisan Laporan Tugas Akhir ini mengkaji secara komprehensif asuhan kebidanan dalam bentuk studi kasus pada Ny. M umur 29 tahun di PMB Sudyah Proboroni Amd.Keb

Metode : Penulisan Laporan Tugas Akhir ini menggunakan pendekatan proses kebidanan 7 langkah Varney. Pengkajian dilakukan dengan melihat hasil data subjektif dan objektif dan observasi secara *home visit*.

Hasil : Laporan Tugas Akhir ini diperoleh diagnosa G₂P₁A₀ usia kehamilan 38 minggu 4 hari fisiologis, dengan tidak ada keluhan, riwayat persalinan fisiologis yang diikuti masa nifas fisiologis dengan tidak ada keluhan, pada kasus tersebut mendapat penanganan dengan pemberian KIE KB untuk ibu menyusui. Riwayat BBL bayi dilahirkan dengan BB : 2800 gram, PB : 50 cm, status kesehatan ibu sedang tidak menderita penyakit apapun.

Kesimpulan : Pada penerapan asuhan kebidanan terdapat kesenjangan antara teori dan praktek asuhan kebidanan yang ada di lahan. Kesenjangan terdapat pada berat badan ibu mengalami penurunan saat akan menghadapi persalinan dan dalam proses melakukan tindakan asuhan.

Kata kunci : Asuhan Kebidanan Kehamilan, Persalinan, Nifas, BBL, KB

ABSTRACT

Nawang Retna^{*}. Agustin Rahmawati^{}. Siti Istiana^{**}**
Comprehensive Midwifery Care on Mrs. M Aged 29 Years
at Midwife Independent Practice Sudyah Proborini Amd. Keb. Genuk, Semarang
(xiv + 154 pages + 9 tables + 2 pictures + 1 chart + 8 appendices)

Background: The number of Mother Mortality Rate (MMR) in Semarang was 23 cases in 2017 and Infant Mortality Rate (IMR) was 24 cases. Five causes of maternal mortality in Semarang is amniotic embolism, liver disorders, peritonitis perforation by 35%, due to heart disease, tuberculosis by 22%, preeclampsia and eclampsia by 22%, bleeding by 17%, sepsis 4%. Based on the data, efforts are needed to decrease the cause of maternal mortality in Indonesia.

Objective: To comprehensively examine a case study midwifery care in Mrs. M aged 29 years at Midwife Independent Practice Sudyah Proboroni Amd. Keb. Project

Method: This research used Varney's 7 step midwifery process approach. Assessment was conducted by looking at the results of subjective and objective data and home visit observations.

Results: This Research obtained a diagnosis of G₂P₁A₀ 38 weeks 4 days physiological gestation, with no complaints, physiological labor history followed by physiological postpartum period with no complaints, in that case received treatment with the provision of Family Planning Information, Education and Communication for breastfeeding mothers. History of birth weight babies born with weight: 2800 grams, Body Length: 50 cm, maternal health status is not suffering from any disease.

Conclusion: In the implementation of midwifery care there is a gap between the theory and practice of midwifery care that is on the land. The gap is in the maternal body weight has decreased when going to face labor and in the process of taking care.

Keywords: Midwifery Care for Pregnancy, Childbirth, Postpartum, Birth Weight, Body Length
