COMPREHENSIVE MIDWIFERY CARE FOR MRS. S, 35 YEARS OLD

AT MIDWIFE IN PRIVATE PRACTICE X SEMARANG

(xv + 153 pages +7 tables +7 appendices)

Background: Maternal Mortality Rate (MMR) in Indonesia decreased 1712 cases in 2017, Central Java 337 cases in 2017, Semarang 23 cases in 2017. The number of IMR in Indonesia has decreased reach 32,007 per 100,000 live births in 2017, Central Java to 3,503 per 1000 live births in 2017, Semarang 7.56 per 1000 live births in 2017. Maternal health can be improved through comprehensive midwifery care.

Objective: Comprehensive midwifery care in the form of a case study at 35 years old Mrs. S at PMB X City of Semarang.

Method: Seven steps of Varney's Midwifery process approach. The assessment was conducted by looking at the results of subjective and objective data, and direct observation.

Result : The result obtained was a diagnosis of GIV PIII A0 gestational age 38⁺³ physiological days, with no complaints, a history of physiological childbirth followed by physiological puerperium, in these cases received proper obstetrical care, history of LBW babies born with BB 2800gram, PB 49cm, LD 33cm , LK 32cm, female sex good health status. In family planning (KB), midwifery care the gap was the client refused to KB.

Conclusion: There is a gap in family planning midwifery care that the patient refuses birth control.
