Manuscript: TJEM-2022-16 - (22) - Overexpression of MiR29b in Plasma of Javanese Type 2 Diabetes Mellitus Patients in Semarang, Indonesia  
Authors: Yanuarita Tursinawati (Corresponding Author), Arum Kartikadewi (Co-author), Ari Yuniastuti (Co-author), R. Susanti (Co-author)  
Date submitted: 2022-03-30

Dear Dr. Tursinawati,

Thank you for submitting your manuscript to Turkish Journal of Endocrinology and Metabolism.

After an initial check we noted the following is missing or needs to be corrected from your manuscript file:

- The main document and figures should be blind. Please exclude all information that may indicate to an individual or institution from the main document. Please put xxx on the center, country and university names at the methods section.
- Tables should be included at the end of the main document (after the References) using word software's "insert table" command and should not be submitted embedded in a separate file.
- Abbreviations used in tables should be defined by footnotes below each table.
- Figures should be submitted as standalone images in .JPG or .TIFF format through the submission system.
- The minimum resolution of each submitted image should be 300DPI and each submitted image is large in size (minimum 100x100mm). Submitting low quality images may cause serious delays in the evaluation and publication processes of your manuscript.
- List the figure legends at the end of the main document.
- Each submission should be accompanied by 3 to 5 "main points" which should emphasize the most noteworthy results of the study and underline the principle message that is addressed to the reader. This section should be structured as itemized to give a general overview of the article. Since "MainPoints" targeting the experts and specialists of the field, each item should be written as plain and straightforward as possible. The main points should be listed before the Introduction, after abstract.

Please visit the instructions to authors to complete your submission and re-submit the manuscript for consideration of publication. You may contact the Editorial Office if you have further questions.

Sincerely,

Alara Ergin

Manuscript: TJEM-2022-16 - (22) - Overexpression of MiR29b in Plasma of Javanese Type 2 Diabetes Mellitus Patients in Semarang, Indonesia  
Date submitted: 2022-04-10

Dear Dr. Tursinawati

Thank you very much for submitting the above manuscript to Turkish Journal of Endocrinology and Metabolism.

Your manuscript has now been evaluated by external reviewers and members of the editorial board. While we certainly find merit in your manuscript, a number of points of criticism were raised and we therefore regret to inform you that your manuscript is not acceptable for publication in its present form. If you feel that you can adequately address the criticisms outlined in the reviewer reports below, we would be willing to reconsider a thoroughly revised version of your manuscript.

When you submit a revised version, please enclose:

1. a point-to-point reply to the reviewers' comments that addresses each comment of each reviewer. Please be as specific as possible in your response to the reviewer(s).
2. a revised version of the manuscript with changes made in bold, underlined or highlighted (adding page and line numbers)
3. a clean revised version (without line numbers).

If you have not already done so, please download the submission statement, fill it in and have each co-author sign the form(s).

We look forward to receiving the revised version within 6 weeks and thank you, again, for submitting your manuscript to Turkish Journal of Endocrinology and Metabolism.

Sincerely,

Murat Erdoğ#287;an  
Deputy Editor  
[murat.erdogan@temd.org.tr](mailto:murat.erdogan@temd.org.tr)  
Turkish Journal of Endocrinology and Metabolism

-----  
Reviewer 1 report:

Comments to authors

- 1-Although there is an age difference between the patient group included in the study and the control group, can we state that miR29b level is negatively correlated with age?
- 2-Although miR29b level has been shown to be associated with cancer, neurogenerative diseases and many systemic diseases, are the inclusion criteria specified for the patients included in this study sufficient?
- 3-There is no data on the glycemic control parameters of the patients included in the study. Information about this data should be added.
- 4-No information was shared about the diabetes duration of the patients and the treatments they were receiving.
- 5-Information on the status of microvascular complications in diabetic patients was not provided. Does this affect miR-29b expression?
- 6-How can you explain the negative correlation with fasting plasma glucose, although it is stated in the article that there is miR-29b overexpression in diabetic patients?
- 7-In this article, there is no data on the patients' habits, such as cigarette smoking and alcohol use, that may affect oxidative stress and miR-29b levels.

Reviewer 2 report:

Comments to authors

Introduction:

1- What do the authors try to mean in the very first sentence: "In Indonesia, non-communicable diseases such as stroke, hypertension, diabetes mellitus, tumor, and heart disease continually increased, but this has not been accompanied by a decrease in the number of infectious diseases."; should a decrease in the infectious disorders expected while the other disorders mentioned increase?

2- Can the author provide reference(s) for this sentence? "Micro-RNA has importance to increase Reactive Oxygen Species (ROS) or decrease the antioxidant expression in T2DM"

Discussion:

This sentence in the discussion section "The miR-29b level is correlated with fasting blood glucose. The higher the expression of miR-29b, the fasting blood glucose level will decrease." Contradicts with the authors' results on the expression of miR-29b in T2DM cases. In the results section the authors show a 14.12 fold increase of miR-29b in T2DM cases, while in the discussion they say the high miR-29b is associated with low FBG levels. Looking at Table 1 this statement is highly contradictory. Can the authors clarify this issue.

Also the discussion is too elaborate and lengthy. miR-29b is highly popular and well studied miRNA, however the authors need to sum up findings of the literature in line with their aims and findings of their studies.

There are plenty of grammar errors, so language editing is needed.

Dear Yanuarita Tursinawati,

Thank you for letting us know. That's okay, when can you possibly send the manuscript with your notes? We will plan accordingly.

Kind regards,  
Alara Ergin  
Publications Coordinator

Dear Editor in Chief,

Please, accept my apology for my late response. I also apologize since your previous email was in SPAM, thus, I didn't receive it.

Thank you for resending the email. I will check it and send it soon once it is completed.

Thank you again.

Best regards,  
Yanuarita Tursinawati

Dear Dr. Tursinawati,

Thank you for checking your manuscript. We've noticed that the reference order was still wrong. All the references should be consecutively ordered in the text. So we took liberty and corrected the consecutive order of the references, but in this case references numbered 14-22-27 and 29 will be deleted. In your notes, you've already suggested to delete references numbered 14-27. Can you please check and tell me where to put the references 22 and 29? The text will be corrected as on the notes on the PDF document, so please check that reference order as well.

Kind regards,  
Alara Ergin  
Publications Coordinator

Dear Editor in Chief,

Thank you for your kind responses.

I have addressed the queries in the pdf file (in Authors' responses file). And, here is the corrections that I have made. Please, kindly find the attached files and process them for the further process.

Thank you very much for your concern.

Best regards,

Yanuarita Tursinawati

Dear Dr. Tursinawati,

Your manuscript titled "Overexpression of MiR29b in Plasma of Javanese Type 2 Diabetes Mellitus Patients in Semarang, Indonesia" has been accepted on 26th of September. I think it was because of the system bug that another paper name appeared on the decision letter. We are looking into it to make sure it won't happen again. Very sorry for the inconvenience.

Kind regards,

**Alara Ergin**
