

ABSTRACT

This study aims to determine the effect of profitability, capital structure and company growth on company value case study in Sharia General Banking for the period 2018 – 2022.

Data collection techniques in this study are non-participant observation, with data collection by reading, collecting, recording and reviewing secondary data needed and contained in the annual financial statements of Islamic Banking companies. Sample selection was carried out using the purposive sampling method so that 8 companies were obtained as research samples. The analysis techniques used are multiple linear regression analysis, T test, F test and coefficient of determination using SPSS Version 2023 as a tool in calculation.

The results of this study obtained the equation $Y = 4.200 + 0.017X_1 - 0.457X_2 - 0.218X_3 + \varepsilon$. The results of the T test show that Profitability has a positive insignificant effect on Company Value with a significant value of 0.732, Capital Structure has a significant negative effect on Company Value with a significant value of 0.003, Company Growth has a significant negative effect on Company Value with a significant value of 0.021. Similarly, the results of simultaneous testing of all independent variables of Profitability, Capital Structure, and Company Growth on Company Value. The Adjusted R-Square value is 0.349 or 34.9%. This means that Profitability, Capital Structure, and Company Growth as a whole affect the Company Value by 41.7%, while the remaining 58.3% is influenced by other variables outside the study.

Keywords: *Profitability, Capital Structure, Company Growth and Company Value.*
